

Build What You've Seen.

A spec campaign concept by Sresha Rajesh — not affiliated with or endorsed by LEGO

CLIENT	LEGO Architecture (Skyline series)
CAMPAIGN TYPE	Gifting & personalization campaign, adult-audience display line
DELIVERABLES	Interactive skyline builder • Social content set • This case study
STATUS	Spec campaign — independent concept work, not a real client engagement

The Opportunity

LEGO Architecture's Skyline series — launched in 2016 — lets people build a stylized skyline of a specific city, from Venice to Singapore to New York City. The sets already sell themselves on shelves; the gap is that most marketing around the Architecture line talks about the brick engineering, not the reason an adult actually buys one: it's a stand-in for a place that mattered to them.

"Build What You've Seen." reframes the Skyline series from a building kit into a personal, buildable memory — three cities on one shelf, chosen by the person building it, not by LEGO.

Why This, Why Now

- LEGO Architecture has grown into a 60+ set line spanning three sub-themes (Landmark, Architect, Skyline) since its 2008 launch by architect Adam Reed Tucker.
- In June 2026, LEGO released the Sagrada Família set — 12,060 pieces, the largest LEGO set ever made — putting new cultural attention on the Architecture line as a design-object category, not just a kids' toy adjacent line.
- The Skyline sub-line is explicitly built around real, identifiable places (Venice, Tokyo, New York City, Paris, Singapore, and others), which is a personalization hook most display-shelf products don't have.

The Idea

Give people a simple way to build their own shelf lineup — the city they grew up in, the city they live in now, the city they haven't been to yet — and let the campaign be built entirely out of real combinations people actually choose, not a single hero image.

Deliverables Prototyped

- Build Your Skyline — an interactive tool where someone picks up to 3 real Skyline cities and sees a personalized shelf mockup with combined piece count, built to live on the product page and in paid social.
- Social content set — a 6-post system: before/after shelf reveal, UGC-style unboxing of a city someone moved away from, a Stories poll driving to the tool, a gifting-occasion post, a build time-lapse, and a launch post for the 2026 Sagrada Família set as the line's aspirational anchor.

How This Would Be Measured

Because this is spec work, there's no real spend or real results to report. Here's how I'd actually measure it if it ran:

- Primary KPI: completion rate on the Build Your Skyline tool (started vs. finished a 3-city selection).
- Secondary KPI: tool-to-product-page click-through rate, segmented by which city combination was selected.
- Channels: Instagram/TikTok Reels and Stories for the social set, on-site placement of the tool on Skyline product pages, email for the gifting-occasion creative around Q4 and spring moving season.
- Test plan: A/B the tool's framing — "cities you've visited" vs. "cities you call home" — to see which framing drives higher completion and higher average order value (more cities selected per shelf).
- Budget split (illustrative): 45% paid social (Meta + TikTok) driving to the tool, 30% on-site/CRM (email, product page placement), 25% creator seeding for the unboxing and time-lapse formats.

A Note on Accuracy

Every LEGO fact referenced in this case study — the 2008 launch date, Adam Reed Tucker as designer, the Skyline series' 2016 launch, individual set piece counts (Venice 212, Tokyo 547, New York City 598, Paris 649, Singapore 827), and the 2026 Sagrada Família set's 12,060-piece count as LEGO's largest set ever — is drawn from public sources (Wikipedia and BrickEconomy) and was fact-checked before publishing. Campaign concept, copy, and all projected metrics are original creative work and are clearly not real performance data.
